

Star Mosaic Design Template

Hey! This is a free template and guide to making your own star mosaic with tile, though I suppose it could really be used for anything!

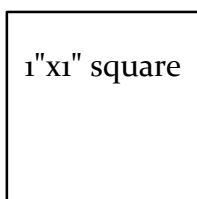

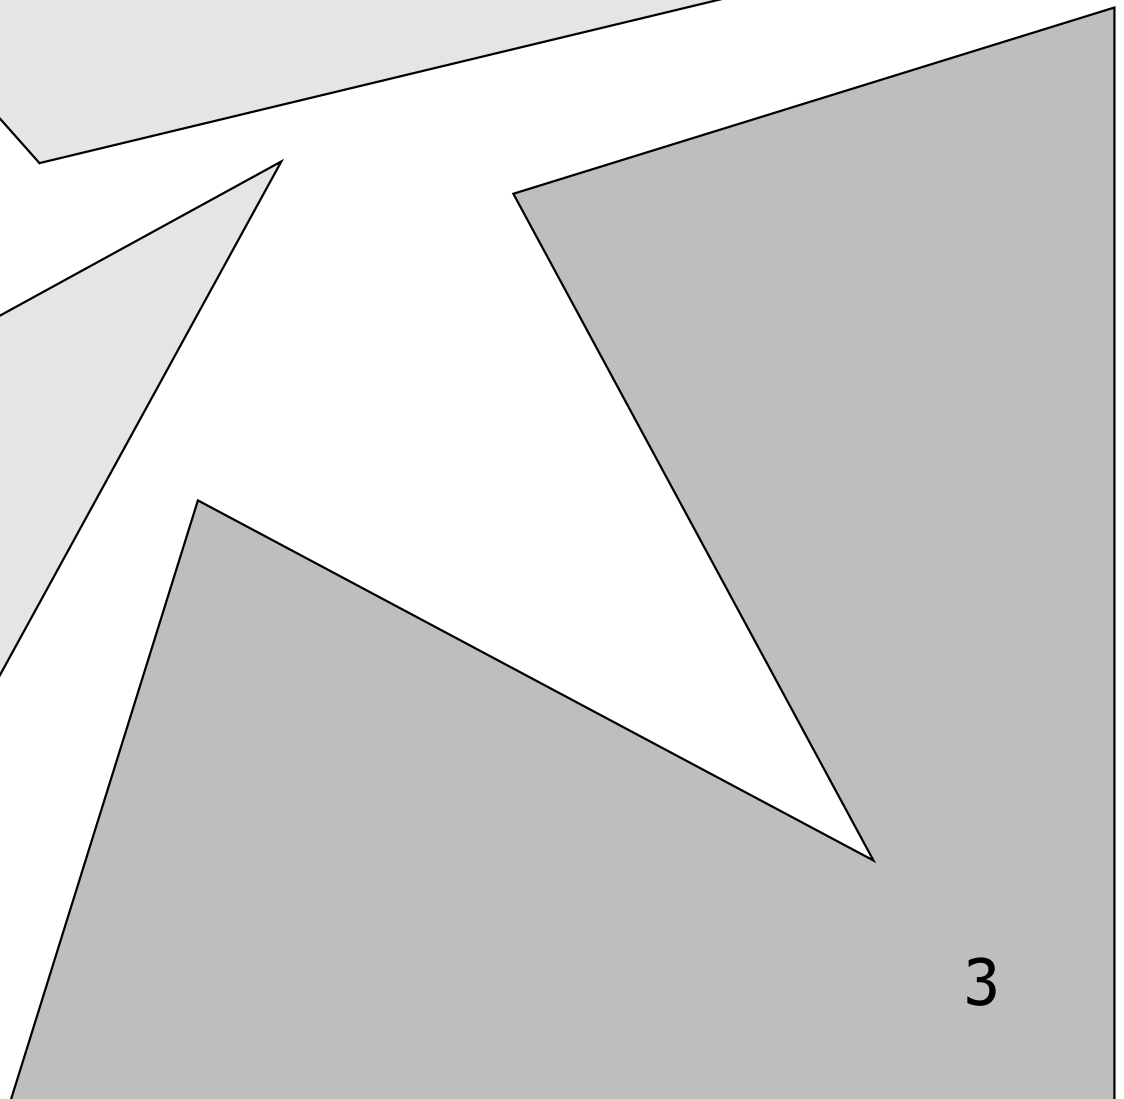

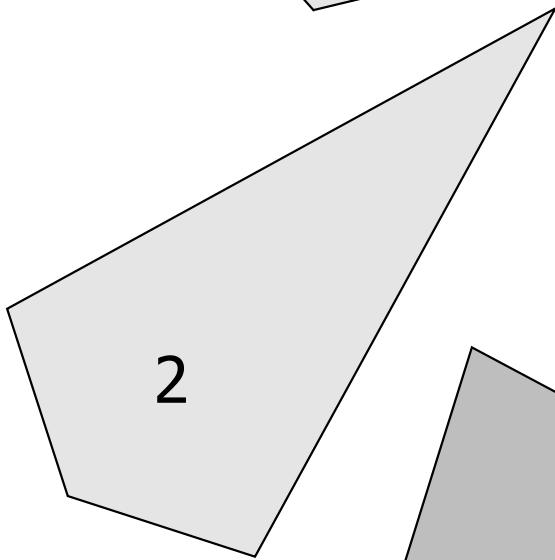

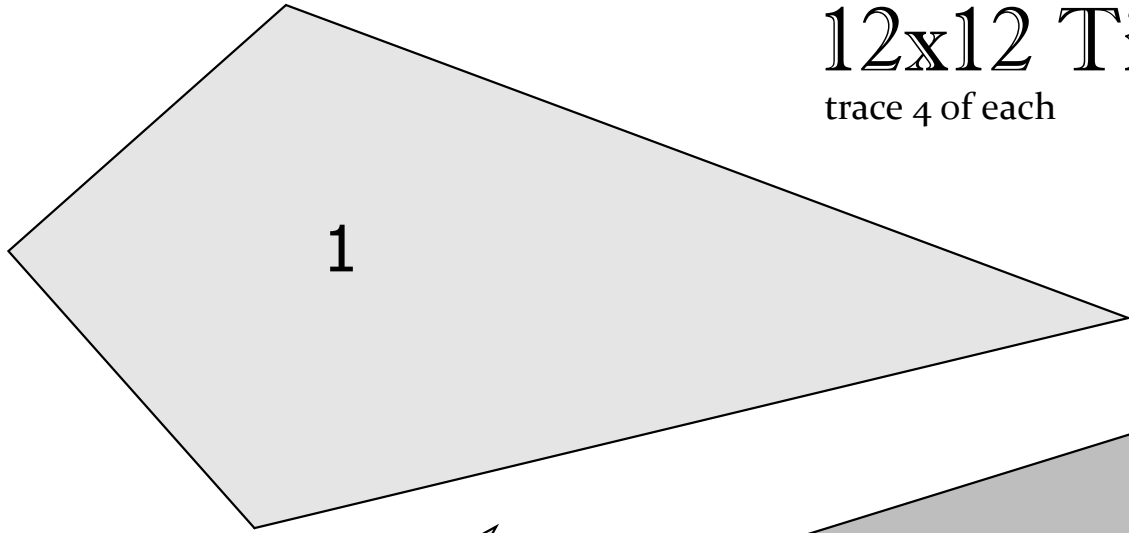

Here is the design this template will yield:

In order to transfer this to the tile, it helps to cut out a template of the three shapes present in the mosaic. I will provide these at the correct size for different common square tile sizes (this is assuming you want to use the design to exactly replace one square tile). I think 8x8 tile would be a little too small for this design to work well, so I'll be starting with 12x12. Of course, with some creativity on your part, you can always scale these to any custom size yourself. Once printed, you can measure the one inch square to verify your printout is true to size.
